COMMENTS FROM THE GOVERNOR

Today's agricultural industry in Montana competes in a global economy. Farmers, ranchers, and agri-business people need concise, reliable information to compete.

The 36th edition of the *Montana Agricultural Statistics* provides agricultural producers and businesses with the information necessary to make decisions and take advantage of opportunities as they arise. Whether these decisions are related to production or marketing, sound information is necessary to make good decisions.

As we enter the 21st century, we applaud the efforts of Montana's agricultural industry for the large contribution they make to Montana's economy while competing in a global market.

Sincerely,

Marc Racicot Governor

MESSAGE FROM THE DIRECTOR

As we enter the 21st century, we have become very conscious how world markets affect us even though we live in Montana. It is even more crucial for our industry to have accurate data to assist in the decision making process. The Montana Agricultural Statistics Service and the Montana Department of Agriculture provide that information in printed and electronic format for easy access.

With this information readily available to our industry, we can make wise decisions that will allow us to continue to produce a high quality product that is competitive in the world market.

Sincerely,

Ralph Peck Director

Lapak took

NOTES FROM THE STATE STATISTICIAN

Montana Agricultural Statistics Service is pleased to present the thirty-sixth edition of *Montana Agricultural Statistics* to Montana's agricultural community. Montana's farmers, ranchers, and agribusinesses made this publication possible through their willingness to provide basic agricultural information. Thank you.

Montana Agricultural Statistics Service works in cooperation with the Montana Department of Agriculture, the Montana Wheat and Barley Committee, the Montana Alfalfa Seed Committee, Montana State University and many other producer organizations to provide valuable agricultural information which will enable producers to meet the challenges of the new millennium.

We have made the information in this bulletin available on our Internet homepage at www.nass.usda.gov/mt/. As you look over the bulletin, we would appreciate any comments or suggestions you have for improving this publication. Again, to everyone involved in Montana's agriculture, thanks for your continued support. Thanks to our staff of statisticians, technicians, and enumerators who are dedicated to providing Montana's number one industry, agriculture, with high quality statistics.

Peggy Stringer State Statistician

MONTANA DEPARTMENT OF AGRICULTURE

The Department of Agriculture, through the Director, is responsible for administration of a \$13 million annual budget with 108 full-time employees. The Director oversees the department's three divisions and seven bureaus. The function of each division is summarized below.

Central Management Division performs technical, fiscal and administrative support functions for the department. Responsibilities of the division include activities for internal operations of the department.

Agricultural Sciences Division provides services, protection and compliance assistance to farmers, agribusinesses, and the public through administration of laws pertaining to pesticides, ground water, noxious weeks, feeds, fertilizers, seed, grain dealers and warehousemen, nurseries, produce, mint, apiaries, alfalfa and leaf-cutting bees, pest surveys, and quarantines. The division licenses and trains persons according to requirements of these laws and registers labels for feeds, fertilizers and pesticides. Label registration protects consumers by assuring that labels provide adequate and fair directions, precautions, and other information. A division laboratory in Bozeman analyzes feeds, fertilizers and pesticides for the public and for division programs. The groundwater program provides protection through monitoring of Montana aquifers for pesticides and fertilizers, administration of best management practices, and compliance.

The noxious weed program administers grants to assist counties and community projects in controlling noxious weeds. This program also administers a program to certify noxious weed seed free forage.

The division provides produce grade inspection services and maintains two federally licensed inspectors capable of issuing federal grade certificates. The division inspects commodities being exported to certify that they meet import requirements of destination countries.

The division administers the bonding and licensing requirements for commodity dealers and warehouses. These requirements protect Montana producers by assuring grain businesses have adequate finances and records.

The apiary program registers Montana apiary sites and inspects resident and migratory beekeepers to protect honeybees from communicable diseases and to provide adequate honey and nectar flow to commercial apiaries.

The division certifies nurseries and nursery stock for the pest management and freedom standards that are expected by states and businesses that receive Montana nursery stock. The division's quarantine program assures that Montana is protected from introductions of non-indigenous pests and prevents transfer of pests within Montana. Yearly surveys of selected pests provide information needed for pest management, commodity certification, pest occurrence and other purposes.

The seed program protects consumers by assuring that seed labels contain truthful and accurate information and seed purity and viability data. The division samples seeds to check label claims and to assure that they meet standards for weed seeds.

The Agricultural Development Division is responsible for administering programs directed at promoting and enhancing Montana agriculture. The Agriculture Finance program is responsible for making grants and lower interest rate loans for rural youth, rural youth organizations, and other qualified farmers and ranchers. The State Hail Insurance programs insure any type of crop grown in Montana from losses caused by hail damage.

The marketing program is responsible for market enhancement and development through direct market development activities, grants, seed capital loan investments in new/innovative marketing, and product development. Statewide agricultural statistics and projections are developed through a Federal/State cooperative agreement administered through the division, which are made available through a comprehensive agricultural statistics bulletin and grain movement summary along with other production, price and income reports. Research and market development efforts are promoted for alfalfa seed through the Montana Alfalfa Seed Committee.

The Montana State Grain Laboratory is located in Great Falls, operating the only official USDA-FGIS state grain grading laboratory in the state of Montana. The lab provides unbiased grain grading, analytical services, and oil seed analysis to the state's grain industry.

The division is responsible for promoting and encouraging intensively scientific and practical research in all phases of wheat and barley culture, production, and marketing under the guidelines and policies developed by the Montana Wheat and Barley Committee.

MONTANA CROP, LIVESTOCK, AND WEATHER DIGEST, 1998

January: The month started out warm, turned very cold, and ended much warmer. Precipitation was below normal, except for the Southwest. Snow cover of winter wheat fields was rated mostly poor to very poor at month's end. Wind damage to winter wheat was minimal. Calving and lambing had just started by the end of the month. Grazing was rated 72 % open and the rest mostly difficult.

February: The month was warm and dry until the last week when a snow storm brought precipitation. Snow cover of winter wheat fields was rated mostly poor to very poor at month's end. Wind damage was mostly light. Calving was 17 % complete and lambing was 11 % complete by the end of the month. Grazing was rated 57% open and the rest mostly closed.

March: The month had relatively mild temperatures and above normal precipitation. Freeze, drought, and wind damage on winter wheat was mostly light. By the end of the month, winter wheat acreage was 72% greening. Producers had just started planting spring wheat and barley at the end of March. Calving and lambing were 58% and 41% complete, respectively.

April: The month had generally warm temperatures and good precipitation. Spring planting started off slowly due to some wet conditions at the beginning of the month. Producers made good seeding progress by the last week with 40% of the spring wheat seeded, compared to the five-year average of 22%. Barley seeded was reported at 38%. The winter wheat crop was rated mostly in good condition. At the end of the month, livestock producers started moving their cattle and sheep to summer pasture. Calving was 89% complete and lambing was 76% complete, compared with the average of 90% and 74%, respectively.

May: At the beginning of the month, farmers took advantage of warm, dry weather to seed crops. Spring wheat and barley seeded was 83% and 85% complete, respectively, and both were about 20 points ahead of normal. Precipitation fell in most areas in the next two weeks, but more was needed to improve crop conditions. At month's end, small grains were rated mostly in fair to good condition. Calving and lambing were virtually complete at the end of the month, and 79% of the cattle and 77% of the sheep had been moved to summer ranges.

June: Most of the state received ample rainfall during the second half of the month, which improved crop conditions. At month's end, small grains were rated mostly in fair to good condition. Due to the continued rain, the first cutting of alfalfa was 18% complete compared with 29% harvested the previous year. All hyestock had been moved to summer ranges by the end of the month. Pasture and range conditions were rated 71% fair to good.

July: Warm weather during the month kept small grain crops ripening ahead of normal, but the lack of precipitation and the heat stressed crops in some areas. Conditions were rated fair to good in

many areas of the state. By the end of the month, winter wheat harvesting was well underway and ahead of last year's harvest. The second cutting of alfalfa hay had just begun.

August: Warm, dry weather continued. During the first week, some producers reported major hail damage to their winter wheat and barley crops. At month's end, small grain harvest was well ahead of normal. The winter wheat harvest was 98% complete, and the spring grain harvest was 87% complete. Pasture conditions were rated as mostly fair due to the hot, dry weather. The second cutting of alfalfa hay was 79% complete.

September: The continued hot, dry weather allowed producers to virtually complete harvest of small grains by the middle of the month. Temperatures cooled as most areas in Montana received some precipitation during the last two weeks in September. By the end of the month, winter wheat seeding was about 40% complete, compared with 61% seeded at this time last year. Row crop harvest was progressing well by month's end. About 30% of the cattle and calves and sheep and lambs had been moved off summer ranges.

October: The first two weeks of the month were marked by lower temperatures and some precipitation in most areas of the state. The weather warmed up the third week but cooled down the last week, with minimal precipitation. Winter wheat seeding was virtually complete as 99% of the crop was planted at month's end. Sugar beet and potato harvest was 88% and 95% complete, respectively. About 84% of the cattle and calves and sheep and lambs had been moved off summer pastures.

November: Most of the state had above normal precipitation and warm temperatures, except for a short cold spell around the 12th of the month. By the end of the month, the winter wheat crop had emerged on 95 percent of the seeded acreage. Snow cover of winter wheat caused producers concern as condition ratings were 23 percent poor and 73 percent very poor. There was some wind damage to the emerging winter wheat. Livestock grazing was reported at 90 percent open. Supplemental feeding continued for 53 percent of the cattle and calves and 47 percent for sheep and lambs.

December: The first 2 ½ weeks of December were mild and dry, then an Arctic front brought very cold temperatures on the 17%. Cold temperatures dominated the weather the rest of the month. Not much snow came along with the cold weather, and snow cover of winter wheat continued to cause some concern with ratings of 30 percent fair, 13 percent poor, and 25 percent very poor. Wind damage to winter wheat was rated mostly light to none. Livestock were reported in good condition. At the end of the month, 95 percent of the cattle and calves were receiving feed, compared with 88 percent for sheep and lambs. Grazing was rated at 36 percent open.

1/ Final sector output is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors of production. Net farm income is the farm operator's share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. 2/ A positive value of inventory change represents current-year production not sold by December 1. A negative value is an offset to production from prior years included in current-year sales.

AGRICULTURE REMAINS THE NUMBER ONE INDUSTRY IN 1998

A comparison of selected Montana industries shows agriculture continues to outpace other industry sectors. Crop cash receipts declined to \$934.3 million, a drop of \$124.2 million or 12 percent from 1997. Livestock cash receipts also declined from 1997 to \$864.7 million, an decrease of 10 percent. Government payments increased 55 percent in 1998 to \$357.9 million.

Except for the travel sectors, gross sales in other industries were down. Receipts for non-residential travel increased \$48 million over 1997, jumping over 4 percent. In the very volatile mining sectors, revenues decreased \$66.6 million and gas and oil revenues decreased \$91.8 million. Wood and paper products also decreased \$120 million due to a decrease in lumber prices.

1/ Marketing year average prices received by farmers are based on monthly prices weighted by monthly marketings during specific periods. These periods, by commodity, are July through June for wheat, oats, and barley; June through May for hay, October through September for corn, January through December for beef cattle, steers and heifers, cows, calves, sheep, lambs; milk, and wool; and December through November for hogs, chickens, and eggs. Prices do not include allowance for CCC loans outstanding, purchases by the government or deficiency payments. 2/ No economic value. -- Not available.

MARKETING YEAR AVERAGE: Prices Received 1/, Selected Commodities, United States, 1991-1998

MONTANA								

^{1/} Counties with less than 500 head or individual operators having 60 percent or more of the head are combined into "other" counties to avoid disclosure of individual information.

MONTANA'S AGRICULTURAL EXPORTS INCREASE SLIGHTLY IN 1998

The value of Montana's agricultural commodities exported during the fiscal year ending September 30, 1998 totaled \$333.2 million, \$22.1 million more than 1997. The value of commodities exported in 1998 accounted for only about a third of the value of commodities exported in 1996. Wheat and wheat products remained Montana's leading export, making up 74 percent of the State's agricultural exports. Exports of wheat and wheat products accounted for the largest increase during 1998 with the value of exports raising \$26.1 million from 1997. Feeds and fodder, and seeds were the only categories to decline, dropping \$1.2 million and \$7.2 million respectively from 1997. Live animals and meat remained relatively constant only increasing \$200,000 from 1997.

In fiscal 1998, the U.S. exported \$53.7 billion worth of agricultural commodities, \$3.6 billion less than 1997. Wheat and wheat products accounted for the largest decrease in U.S. exports, dropping \$3.7 million from 1997. Nationally, wheat and wheat products make up 7.4 percent of all exports, off only slightly from 1997.

Montana moved up from a fifth place ranking to fourth place among states exporting wheat and wheat products in fiscal year 1998. Kansas remained in the top position as a wheat exporter, followed by North Dakota, Washington, and Montana. Considering the export of all products, California remained on top, followed by Iowa, Texas, Illinois and Nebraska. Montana remained in thirty-forth position for export of all products.

WORLD WHEAT STOCKS TO DROP IN 1999/2000

World wheat stocks are forecast to drop 13 million tons in 1999/2000, the largest reduction since 1994/95. World wheat production is declining by 13 million tons at the same time that foreign consumption is relatively stable. The global ending-stocks-to-use ratio is expected to drop to 21 percent, almost as low as the 19.8 percent reached in 1996/97, and prices that season reached very high levels. Exports in 1999/2000 are expected to rise 10 percent from the disappointing 1998/99 total that included a substantial quantity of food aid. For 1999/2000, a more usual price pattern is expected, with prices reaching their seasonal low during harvest and increasing as the marketing season progresses. Declining returns in recent years have encouraged producers to switch to other crops or leave more land fallow. However, little if any increase in world prices is expected in 1999/2000 because major wheat exporters' supplies are large.
